Project Title : Salesforce Developer Catalyst Self-Learning & Super Badges

EMAIL : bk179977@gmail.com

SBID : SB20220180133

Apex Triggers:

Get Started with Apex Triggers :

AccountAddressTrigger:

```
trigger AccountAddressTrigger on Account (before insert , before update) {
    for (Account a : Trigger.new){
         if(a.Match_Billing_Address__c == true){
        a.ShippingPostalCode =     a.BillingPostalCode;
    }

    }
}
```

Bulk Apex Triggers :

ClosedOpportunityTrigger:

```
trigger ClosedOpportunityTrigger on Opportunity (after insert,after update) {
list<Task> newTask= new list<Task>();
    for(Opportunity oppWon :[Select Id from Opportunity where StageName='Closed
Won'
                            and Id in: Trigger.new]){
        newTask.add(new Task (Subject ='Follow Up Test Task',WhatId=oppWon.Id));
    }
    if(newTask.size()>0){
        upsert newTask;
    }
}
```

Apex Testing:

Get Started with Apex Unit Tests:

VerifyDate:

```
public class VerifyDate {
//method to handle potential checks against two dates
public static Date CheckDates(Date date1, Date date2) {
//if date2 is within the next 30 days of date1, use date2.  Otherwise use the end of the
month
if(DateWithin30Days(date1,date2)) {
return date2;
} else {
return SetEndOfMonthDate(date1);
}
}
//method to check if date2 is within the next 30 days of date1
private static Boolean DateWithin30Days(Date date1, Date date2) {
//check for date2 being in the past
        if( date2 < date1) { return false; }

        //check that date2 is within (>=) 30 days of date1
        Date date30Days = date1.addDays(30); //create a date 30 days away from date1
if( date2 >= date30Days ) { return false; }
else { return true; }
}

//method to return the end of the month of a given date
private static Date SetEndOfMonthDate(Date date1) {
```

```
Integer totalDays = Date.daysInMonth(date1.year(), date1.month());
Date lastDay = Date.newInstance(date1.year(), date1.month(), totalDays);
return lastDay;
}
}
```

TestVerifyDate:

```
@istest
public class TestVerifyDate {
    @istest Static Void test1(){
        Date d =
Verifydate.Checkdates(date.parse('01/01/2022'),date.parse('01/03/2022'));
        System.assertEquals(date.parse('01/03/2022'),d);
    }
    @istest Static Void test2(){
        Date d =
Verifydate.Checkdates(date.parse('01/01/2022'),date.parse('03/03/2022'));
        System.assertEquals(date.parse('01/31/2022'),d);
    }
}
```

Test Apex Triggers:

RestrictContactByName:

```
trigger RestrictContactByName on Contact (before insert, before update) {
//check contacts prior to insert or update for invalid data
For (Contact c : Trigger.New) {
if(c.LastName == 'INVALIDNAME') {//invalidname is invalid
c.AddError('The Last Name "'+c.LastName+'" is not allowed for DML');
}
}

}
```

TestRestrictContactByName:

```
@isTest
public class TestRestrictContactByName {
@isTest
    public static void testcontact(){
        contact ct = new contact();
        ct.LastName = 'INVALIDNAME';
        database.Saveresult res = Database.insert(ct,false);
        System.assertEquals('The Last Name "INVALIDNAME" is not allowed for
DML',res.getErrors()[0].getMessage());

    }
}
```

Create Test Data for Apex Tests:

RandomContactFactory:

```
public class RandomContactFactory {
    Public static List<contact> generateRandomContacts (integer num, string lastName){
        List<Contact> contactlist = new list<contact>();
        for(integer i=1;i<=num;i++){
            contact ct = new contact(FirstName = 'Test' + i,LastName= lastName);
            contactlist.add(ct);
        }
       return contactlist;
    }
}
```

Asynchronous Apex:

Use Future Methods:

AccountProcessor:

```
public class AccountProcessor {
@future
public static void countContacts(List<Id> accountIds){
List<Account> accounts = [Select Id, Name from Account Where Id IN: accountIds];
List<Account> updatedAccounts = new List<Account>();
for (Account account :accounts){
account.Number_Of_Contacts__c = [Select count() from Contact Where AccountId=:
account.Id];
    System.debug('No Of Contacts = '+ account.Number_Of_Contacts__c);
 updatedAccounts.add(account);
}
update updatedAccounts;
}
}
```

AccountProcessorTest:

```
@isTest
public class AccountProcessorTest {
   @isTest
public static void testNoOfContacts(){
Account a = new Account();
a.Name = 'Test Account';
Insert a;

Contact c= new Contact();
c.FirstName = 'Bob';
c.LastName= 'Willie';
c.AccountId = a.Id;

Contact c2 = new Contact();
c2.FirstName='Tom';
c2.LastName = 'Cruise';
c2.AccountId = a.Id;

List<Id>  acctIds = new List<Id>();
acctIds.add(a.Id);

Test.startTest();
AccountProcessor.countContacts(acctIds);
Test.stopTest();
    }
}
```

<u>**Use Batch Apex**</u>:

LeadProcessor:

```
global class LeadProcessor implements Database.Batchable<sObject> {
global Integer count = 0;

global Database.QueryLocator start(Database.BatchableContext bc){
        return Database.getQueryLocator('SELECT ID, LeadSource FROM Lead');
    }

global void execute (Database.BatchableContext bc, List<lead> L_list){
        List<lead> L_list_new= new List<lead>();

for(lead L:L_list){
L.leadsource = 'Dreamforce';
L_list_new.add(L);
count += 1;
    }
update L_list_new;
    }
        global void finish(Database.BatchableContext bc){
system.debug('count = ' + count);
}
}
```

LeadProcessorTest:

```
@isTest
public class LeadProcessorTest {
    @isTest
public static void testit(){
List<lead> L_list = new List<lead>();

for (Integer i=0; i<200; i++){
Lead L = new lead();
L.LastName = 'name' + i;
L.Company = 'Company';
L.Status = 'Random Status';
        L_List.add(L);
       }
insert L_List;
        Test.startTest();
LeadProcessor lp = new LeadProcessor();
Id batchId = Database.executeBatch(lp);
Test.stopTest();
    }
}
```

<u>Control Processes with Queueable Apex</u>:

AddPrimaryContact:

```
public class AddPrimaryContact implements Queueable {
public contact c;
public String state;

public AddPrimaryContact(Contact c, String state) {
this.c = c;
this.state = state;
}

public void execute(QueueableContext qc) {
system.debug('this.c = '+this.c+' this.state = '+this.state);
List<Account> accList = new List<account>([select id, name, BillingState from account
where account.BillingState = :this.state limit 200]);
List<contact> insertContact = new List<contact>();
for(account a: accList) {
contact c = new contact();
c = this.c.clone(false, false, false, false);
c.AccountId = a.Id;
insertContact.add(c);
}
insert insertContact;
}
}
```

AddPrimaryContactTest:

```
@isTest
public class AddPrimaryContactTest {

@testSetup
static void setup() {
List<Account> insertAccount = new List<Account>();
for(integer i=0; i<=100; i++) {
if(i <=50) {
insertAccount.add(new Account(Name='Acc'+i, BillingState = 'NY'));
} else {
insertAccount.add(new Account(Name='Acc'+i, BillingState = 'CA'));
}
}
insert insertAccount;
}

static testMethod void testAddPrimaryContact() {
Contact con = new Contact(LastName = 'LastName');
AddPrimaryContact addPC = new AddPrimaryContact(con, 'CA');
Test.startTest();
system.enqueueJob(addPC);
Test.stopTest();
system.assertEquals(50, [select count() from Contact]);
}

}
```

<u>Schedule Jobs Using the Apex Scheduler</u>:

DailyLeadProcessor:

```
global class DailyLeadProcessor implements Schedulable {

    global void execute(SchedulableContext ctx) {

        //Retrieving the 200 first leads where lead source is in blank.
        List<Lead> leads = [SELECT ID, LeadSource FROM Lead where LeadSource = ''
LIMIT 200];

        //Setting the LeadSource field the 'Dreamforce' value.
        for (Lead lead : leads) {
            lead.LeadSource = 'Dreamforce';
        }

        //Updating all elements in the list.
        update leads;
    }

}
```

DailyLeadProcessorTest:

```
@isTest
private class DailyLeadProcessorTest {

    @isTest
    public static void testDailyLeadProcessor(){

        //Creating new 200 Leads and inserting them.
        List<Lead> leads = new List<Lead>();
        for (Integer x = 0; x < 200; x++) {
            leads.add(new Lead(lastname='lead number ' + x, company='company number '
+ x));
        }
        insert leads;

        //Starting test. Putting in the schedule and running the DailyLeadProcessor
execute method.
        Test.startTest();
        String jobId = System.schedule('DailyLeadProcessor', '0 0 12 * * ?', new
DailyLeadProcessor());
        Test.stopTest();

        //Once the job has finished, retrieve all modified leads.
        List<Lead> listResult = [SELECT ID, LeadSource FROM Lead where LeadSource
= 'Dreamforce' LIMIT 200];

        //Checking if the modified leads are the same size number that we created in the
start of this method.
        System.assertEquals(200, listResult.size());

    }
}
```

Apex Integration Services:

<u>Apex REST Callouts</u>:

AnimalLocator:

```
public class AnimalLocator{
    public static String getAnimalNameById(Integer x){
        Http http = new Http();
        HttpRequest req = new HttpRequest();
        req.setEndpoint('https://th-apex-http-callout.herokuapp.com/animals/' + x);
        req.setMethod('GET');
        Map<String, Object> animal= new Map<String, Object>();
        HttpResponse res = http.send(req);
           if (res.getStatusCode() == 200) {
        Map<String, Object> results = (Map<String,
Object>)JSON.deserializeUntyped(res.getBody());
      animal = (Map<String, Object>) results.get('animal');
        }
return (String)animal.get('name');
    }
}
```

AnimalLocatorTest:

```
@isTest
private class AnimalLocatorTest{
    @isTest static void AnimalLocatorMock1() {
        Test.setMock(HttpCalloutMock.class, new AnimalLocatorMock());
        string result = AnimalLocator.getAnimalNameById(3);
        String expectedResult = 'chicken';
        System.assertEquals(result,expectedResult );
    }
}
```

AnimalLocatorMock:

```
@isTest
global class AnimalLocatorMock implements HttpCalloutMock {
     // Implement this interface method
    global HTTPResponse respond(HTTPRequest request) {
        // Create a fake response
        HttpResponse response = new HttpResponse();
        response.setHeader('Content-Type', 'application/json');
        response.setBody('{"animals": ["majestic badger", "fluffy bunny", "scary bear",
"chicken", "mighty moose"]}');
        response.setStatusCode(200);
        return response;
    }
}
```

<u>Apex SOAP Callouts</u>:
ParkLocator:

```
public class ParkLocator {
    public static string[] country(string theCountry) {
        ParkService.ParksImplPort  parkSvc = new  ParkService.ParksImplPort(); //
remove space
        return parkSvc.byCountry(theCountry);
    }
}
```

ParkLocatorTest:

```
@isTest
private class ParkLocatorTest {
    @isTest static void testCallout() {
        Test.setMock(WebServiceMock.class, new ParkServiceMock ());
        String country = 'United States';
        List<String> result = ParkLocator.country(country);
        List<String> parks = new List<String>{'Yellowstone', 'Mackinac National Park',
'Yosemite'};
         System.assertEquals(parks, result);
    }
}
```

ParkServiceMock:

```
@isTest
global class ParkServiceMock implements WebServiceMock {
   global void doInvoke(
           Object stub,
           Object request,
           Map<String, Object> response,
           String endpoint,
            String soapAction,
            String requestName,
            String responseNS,
            String responseName,
            String responseType) {
        // start - specify the response you want to send
        ParkService.byCountryResponse response_x = new
ParkService.byCountryResponse();
        response_x.return_x = new List<String>{'Yellowstone', 'Mackinac National Park',
'Yosemite'};
        // end
        response.put('response_x', response_x);
   }
}
```

Apex Web Services:

AccountManager:

```
@RestResource(urlMapping='/Accounts/*/contacts')
global class AccountManager {
    @HttpGet
    global static Account getAccount() {
        RestRequest req = RestContext.request;
        String accId = req.requestURI.substringBetween('Accounts/', '/contacts');
        Account acc = [SELECT Id, Name, (SELECT Id, Name FROM Contacts)
                       FROM Account WHERE Id = :accId];
        return acc;
    }
}
```

AccountManagerTest:

```
@isTest
private class AccountManagerTest {

    private static testMethod void getAccountTest1() {
        Id recordId = createTestRecord();
        // Set up a test request
        RestRequest request = new RestRequest();
        request.requestUri = 'https://na1.salesforce.com/services/apexrest/Accounts/'+
recordId +'/contacts' ;
        request.httpMethod = 'GET';
        RestContext.request = request;
        // Call the method to test
        Account thisAccount = AccountManager.getAccount();
        // Verify results
        System.assert(thisAccount != null);
        System.assertEquals('Test record', thisAccount.Name);

    }

    // Helper method
        static Id createTestRecord() {
        // Create test record
        Account TestAcc = new Account(
          Name='Test record');
        insert TestAcc;
        Contact TestCon= new Contact(
        LastName='Test',
        AccountId = TestAcc.id);
        return TestAcc.Id;
    }
}
```

Apex Specialist Superbadge:

1. **Automated Record Creation**

MaintenanceRequestHelper.apxc

```
public with sharing class MaintenanceRequestHelper {
    public static void updateworkOrders(List<Case> updWorkOrders, Map<Id,Case>
nonUpdCaseMap) {
        Set<Id> validIds = new Set<Id>();

        For (Case c : updWorkOrders){
            if (nonUpdCaseMap.get(c.Id).Status != 'Closed' && c.Status == 'Closed'){
                if (c.Type == 'Repair' || c.Type == 'Routine Maintenance'){
                    validIds.add(c.Id);

                }
            }
        }

        if (!validIds.isEmpty()){
            List<Case> newCases = new List<Case>();
            Map<Id,Case> closedCasesM = new Map<Id,Case>([SELECT Id, Vehicle__c,
Equipment__c, Equipment__r.Maintenance_Cycle__c,(SELECT
Id,Equipment__c,Quantity__c FROM Equipment_Maintenance_Items__r)
                                                         FROM Case WHERE Id IN :validIds]);
            Map<Id,Decimal> maintenanceCycles = new Map<ID,Decimal>();
            AggregateResult[] results = [SELECT Maintenance_Request__c,
MIN(Equipment__r.Maintenance_Cycle__c)cycle FROM
Equipment_Maintenance_Item__c WHERE Maintenance_Request__c IN :ValidIds
GROUP BY Maintenance_Request__c];

        for (AggregateResult ar : results){
            maintenanceCycles.put((Id) ar.get('Maintenance_Request__c'), (Decimal)
ar.get('cycle'));
        }

closedCasesM.get(nc.ParentId).Equipment_Maintenance_Items__r){
                    Equipment_Maintenance_Item__c wpClone = wp.clone();
                    wpClone.Maintenance_Request__c = nc.Id;
                    ClonedWPs.add(wpClone);

                }
            }
            insert ClonedWPs;
        }
    }
}
```
MaitenanceRequest.apxt

```
 trigger MaintenanceRequest on Case (before update, after update) {

    if(Trigger.isUpdate && Trigger.isAfter){

        MaintenanceRequestHelper.updateWorkOrders(Trigger.New, Trigger.OldMap);

    }

}
```

2. Synchronize Salesforce data with an external system

WarehouseCalloutService.apxc :-

```
public with sharing class WarehouseCalloutService implements Queueable {
    private static final String WAREHOUSE_URL = 'https://th-superbadge-
apex.herokuapp.com/equipment';

    //class that makes a REST callout to an external warehouse system to get a list of
equipment that needs to be updated.
    //The callout’s JSON response returns the equipment records that you upsert in
Salesforce.

    @future(callout=true)
    public static void runWarehouseEquipmentSync(){
        Http http = new Http();
        HttpRequest request = new HttpRequest();

        request.setEndpoint(WAREHOUSE_URL);
        request.setMethod('GET');
        HttpResponse response = http.send(request);

        List<Product2> warehouseEq = new List<Product2>();

        if (response.getStatusCode() == 200){
            List<Object> jsonResponse =
(List<Object>)JSON.deserializeUntyped(response.getBody());
            System.debug(response.getBody());

            //class maps the following fields: replacement part (always true), cost, current
inventory, lifespan, maintenance cycle, and warehouse SKU
```

```
            //warehouse SKU will be external ID for identifying which equipment records to
update within Salesforce
            for (Object eq : jsonResponse){
                Map<String,Object> mapJson = (Map<String,Object>)eq;
                Product2 myEq = new Product2();
                myEq.Replacement_Part__c = (Boolean) mapJson.get('replacement');
                myEq.Name = (String) mapJson.get('name');
                myEq.Maintenance_Cycle__c = (Integer) mapJson.get('maintenanceperiod');
                myEq.Lifespan_Months__c = (Integer) mapJson.get('lifespan');
                myEq.Cost__c = (Integer) mapJson.get('cost');
                myEq.Warehouse_SKU__c = (String) mapJson.get('sku');
                myEq.Current_Inventory__c = (Double) mapJson.get('quantity');
                myEq.ProductCode = (String) mapJson.get('_id');
                warehouseEq.add(myEq);
            }

            if (warehouseEq.size() > 0){
                upsert warehouseEq;
                System.debug('Your equipment was synced with the warehouse one');
            }
        }
    }

    public static void execute (QueueableContext context){
        runWarehouseEquipmentSync();
    }

}
```

3.Schedule synchronization using Apex code

WarehouseSyncShedule.apxc :-

```
global with sharing class WarehouseSyncSchedule implements Schedulable{
    global void execute(SchedulableContext ctx){
        System.enqueueJob(new WarehouseCalloutService());
    }
}
```

4.Test automation logic

MaintenanceRequestHelperTest.apxc :-

```
@istest
public with sharing class MaintenanceRequestHelperTest {

    private static final string STATUS_NEW = 'New';
    private static final string WORKING = 'Working';
    private static final string CLOSED = 'Closed';
    private static final string REPAIR = 'Repair';
    private static final string REQUEST_ORIGIN = 'Web';
    private static final string REQUEST_TYPE = 'Routine Maintenance';
    private static final string REQUEST_SUBJECT = 'Testing subject';

    PRIVATE STATIC Vehicle__c createVehicle(){
        Vehicle__c Vehicle = new Vehicle__C(name = 'SuperTruck');
        return Vehicle;
    }

    PRIVATE STATIC Product2 createEq(){
        product2 equipment = new product2(name = 'SuperEquipment',
                                         lifespan_months__C = 10,
                                         maintenance_cycle__C = 10,
                                         replacement_part__c = true);
        return equipment;
    }

    PRIVATE STATIC Case createMaintenanceRequest(id vehicleId, id equipmentId){
        case cs = new case(Type=REPAIR,
